

Name: _____

All About Squishy Squid

By Lydia Lukidis

Have you ever seen a squid before? Maybe you caught a glimpse of one of these squishy sea creatures on television or at the aquarium. You may have even seen one in the ocean on a family vacation! There's a lot of fascinating things to know about squid. Let's take a closer look together!

Squid belong to a group of ocean animals called "mollusks." Because squid do not have bones, their bodies are very soft. They are considered invertebrates,

Squid live in both saltwater and fresh water. They like to live quite deep in the ocean. Some can be found more than 13,000 feet (3,962 meters) deep. But sometimes they like to swim in shallower waters, or even along the coast.

Squid are carnivores. That means they only eat meat. They eat lots of fish and shrimp. Sometimes they even eat smaller squid!

You might be surprised to know that squid do not live a very long life. No matter what their size or what they eat, the average lifespan of a squid is only about three to five years.

Scientists have discovered more than 300 types of squid. There could be as many as 200 more types that we still have to discover.

The biggest squid we know about is called the giant squid. It can grow up to 60 feet (18 meters) long and weigh more than 1,000 pounds. That's longer than a school bus! No wonder it's one of the biggest animals on the planet. Everything about the giant squid is giant, including its eyes which are the size of basketballs.
