Did you know snakes are not the only reptiles without legs? Some lizards are also legless! The best-known legless lizards belong to a group called glass lizards.

The name comes from the fact that their tails can break off easily. Often, a glass lizard loses its tail while escaping a predator. The lizard will slowly regrow the tail, but the replacement is usually smaller. If a snake loses its tail, it will not

Read each word. Write the number of syllables on each line.
