Math Cards

Comparing Fractions

This file contains 3 symbol cards, three phrase cards, and 18 number cards. They can be used to teach students about comparing fractions.

There are countless ways to use these number and symbol cards in your classroom. Here are a few ideas:

Small Group Instruction

Lay the number cards upside-down on the table. A student randomly chooses two. He or she lays out a number sentence on the table. (example: $\frac{3}{4} > \frac{3}{8}$)

Whole Group Instruction

Use these cards on with your document camera to display them on a Smartboard during your lesson.

Learning Center

Place the cards on a large table. Students make as many number sentences as possible with the cards and write them in their notebooks.

Independent Practice

Each student is given a set of cards. He or she cut construction paper. If they use all of the words and symbol cards, they should be able to make 6 different number sentences.
