“Greater Than” and “Less Than” Game

Objective:

Students will compare the values of 3-digit numbers using symbols and words.

Materials:

Each team will need a game page, a pencil, and a die.

How to play:

Player 1 and player 2 each roll a die three times to make 3-digit numbers.
They record their rolls on the page.

example: Player 1 rolls a 5, then a 2, and then a 3.
Player 2 rolls a 1, then a 3, and then a 5.
They will write the numbers on the game board like this:

example:

	<u>5 2 3</u> player 1	$\boxed{>}$	<u>1 3 5</u> player 2	
<p>is less than</p> <p style="border: 1px solid black; border-radius: 50%; padding: 5px; display: inline-block;">is greater than</p> <p>is equal to</p>				

The player with the greater number wins the round. If the numbers are equal, there is no winner for that round.

Management Suggestions:

Encourage students to read the final number sentence aloud at the end of each round.

Instead of a die, you may want to play the game with a spinner or number cards.

The game moves quickly, so you may want to make double-sided game boards to allow students to play up to 16 rounds.
