# Glacier National Park

Glacier National Park is located in the U.S. state of Montana. It's known for having a range of ecosystems, from prairie to tundra. The park stretches across more than 1 million acres and has more than 130 lakes. Many wild animals, such as grizzly bears, moose, wolverines, and Canadian lynx, live there. More than 1,000 different plant species also call the park home.

Glacier National Park got its name from the many glaciers that shaped its land. A glacier is a large piece of ice that slowly moves over an area. Over many years, a glacier's
